

- 1, Download the Update software and UpdateFirmware, storing both files under a same root.

- 2, Double click the UpdateFirmware to start it, and it shows as follows:

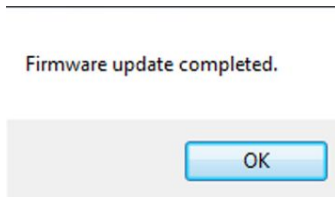

- 3, Connecting your PC and your device with USB cable, then you will see the Update choice turns into blue.

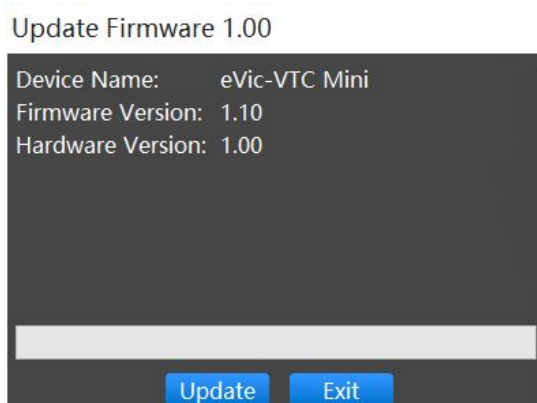

- 4, Click it, choosing the file to be upgraded: eVic\_VTC\_Mini\_V1.10.bin

- 5, Please click Confirm after firmware update completed.

- 6, Firmware Version of the device will present 1.10 after update. Click Exit and disconnect the USB cable to complete the whole process of firmware update.

Note:

1) If blank screen appears while upgrading, please restart the upgrade or press “-” button to get back.

2) If you get stuck while upgrading, please try: taking off the cell and atomizer first and then start the upgrade process.

If it still doesn't work, kindly please try:

- 1, connect the USB cable to your PC first and start the upgrade program (VT software);
- 2, keep pressing the “+” button, and then plug to the USB port;
- 3, start the upgrade process.
