

eGo-C Twist Battery User Manual

eGo-C Twist variable voltage battery has inner smart Buck-BOOST converter, which can adjust voltage from 3.2V~4.8V. You can adjust the battery voltage according to your need.

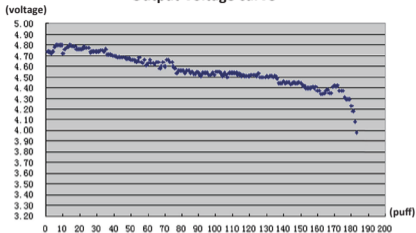

Accurate adjustment of output voltage, intensified short circuit protection, discharge and overcharge protection, switch protection, atomizer protection, low voltage protection.

Following are test result by certain conditions:

1. 2.2 Atomizer heating element.
2. 4.8V battery output
3. Each puff last 4 seconds.
4. 5 seconds between each puff.
5. Testing without stop until battery finish.

Output Voltage curve

Basic features and operation of eGo-C Twist variable voltage battery:

Variable voltage output	Voltage can be adjusted from 3.2V~4.8V, You can choose the voltage by spinning the knob at the bottom.
Short-circuit protection	When short circuit happens, the battery will shut down. The battery won't go back to work until short circuit ends.
Switch protection	Press the button 5 times within 1.5 seconds. Lock/Unlock
Atomizer protection	If you press the button for 10 seconds, the battery will be locked until the next press.
Low voltage protection	When the battery voltage is lower than 3.3V, the battery will shut down.
charge	White LED blinks 5 times. eGo USB charge can be used.
