# HOW TO UPGRADE

YOUR ELITAR PIPE (FOR WINDOWS)

1, Download the Update software and UpdateFirmware, storing both files under a same root.

2, Double click the UpdateFirmware to start, and it shows as follows:

3, Connecting your device to the computer via USB cable. The Update icon will turn into blue.

4, Click the Update icon, choose the file (Elitar_Pipe_V1.01.bin) to upgrade.

5，   Please click Confirm after firmware update completed.

6，   Click the logo icon, choose the custom logos you've prepared. Attention, all the logos shall be single color bmp. picture with limited 64*48 pixel.

7，   Click OK to complete. Press exit to disconnect.

Note：

1) Should you encounter blank screen while upgrading, please restart the upgrade or press "-" button to go back.

2) Should you get stuck while upgrading, please try: taking off the cell and atomizer first and then restart the upgrade process.

    If it still doesn't work, kindly please try:

    1, connect the USB cable to your PC first and start the upgrade program (VT software);

    2, keep pressing the "+" button, and then plug to the USB port;

    3, start the upgrade process.
